

NUVA IOT CLOUD

SINGLE PLATFORM MULTIPLE FUNCTIONS

- Smart farming dataloggers
- BLE asset tracking
- EDGE and Cloud alarm triggers.
- GPS asset tracking
- Cold Chain monitoring
- Power meters historic
- Security and access Control
- **Group View GIS interface with realtime update.**

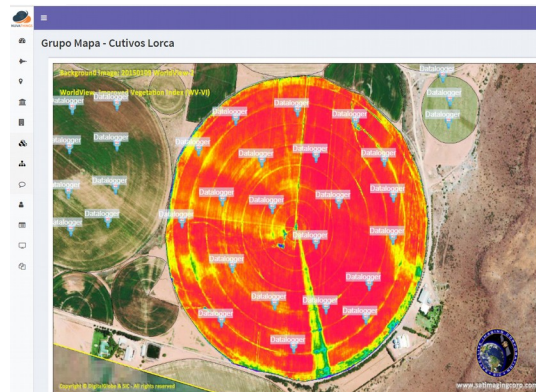

APP

All functions which are served in Nuva cloud web are available at the NuvApp. The NuvApp is a PWA which can be installed at Android or IOS once Login access is granted on the mobile navigator. Can receive push notifications in case of programmable events or alarms.

- Nuva cloud is the own cloud platform designed to work with Cirrus-4T device series, it provides database, historic view and device control and configuration.
- it also provides device firmware updates which can be managed in batch processes.
- Filters for checking the status of devices enables full monitoring of devices status and behavior on the field.
- Nuva cloud is not a front end generator, it is a cloud platform which integrates seamlessly with Cirrus-4T devices.
- IP interface between Cirrus device use binary format which dramatically reduces the amount of data and thus offering a very low cost Simcard connectivity.
- VPN, worldwide cellular connection.
- Websocket updates on views.

device/group monitoring

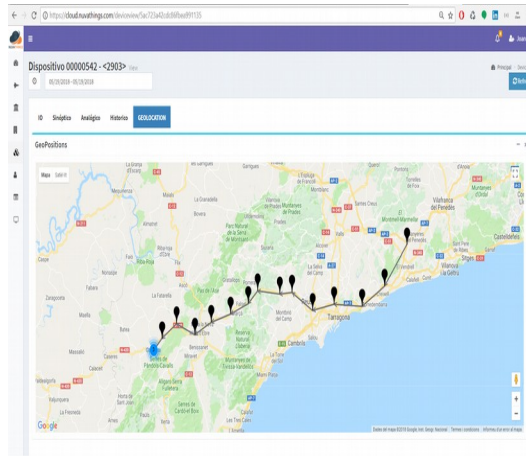

- A group is meant for an association of devices, sensors, assets and users, groups can have a GIS view where all group members are related into a geo-spatial map, the map can be a land, satellite map or an indoor building drawing.
- Devices, sensors values, GPS devices and even users with Bluetooth trackers can be displayed in real time on the canvas map.
- More over one of the great functions of Nuva cloud map view is the ability to display the LORA links between devices and related to the LORAWAN gateways.

Device views.

CUSTOM VIEWS

Whatever your needs are concerning displaying a certain information in a particular way, Nuvathings team will be happy to design for you the view you're looking for.

For more information on any of our products or services, or just for asking for a free demo credentials, please visit us on the web at: www.nuvathings.com or email us: info@nuvathings.com

- Multiple views are possible for each kind of application ranging from security and access control systems, till cold chain monitoring, power meters, industrial dataloggers, smart farming dataloggers and etc...
- Remote control of device's outputs can be customized in its number.
- Cloud can be DNS customized for your brand with https security and personalized APP's.
